b
observed 1961
fitted model: scrap exhausted
fitted model
scrap limiter on ($n = 0.5$)
price-elastic demand ($\varepsilon_P = 0.2$)
equal response gains
cycle amplitude, sd of band-passed ln price
secondary share of supply in 1961 (total supply fixed)
c
share 0.05
share 0.19 (observed)
share 0.25
band-passed ln price (15–56 yr)
year
d
extraction volatility, sd of annual change in ln E (%)
secondary share of supply in 1961 (total supply fixed)
